| <p><b>1. Problem Statement:</b></p> <p>The problem is to design a system that can identify and classify different types of objects in an image.</p>                                                                                                                                                                                                                                       |  | <p><b>2. Objectives:</b></p> <p>The objectives of this project are to:</p> <ul style="list-style-type: none"> <li>Develop a system that can identify and classify different types of objects in an image.</li> <li>Evaluate the performance of the system using various metrics.</li> </ul> |  |
| <p><b>3. Scope:</b></p> <p>The scope of this project is to design and implement a system that can identify and classify different types of objects in an image.</p>                                                                                                                                                                                                                       |  | <p><b>4. Assumptions:</b></p> <p>The assumptions made for this project are:</p> <ul style="list-style-type: none"> <li>The input image is of high quality and contains clear objects.</li> <li>The system is trained on a large dataset of images.</li> </ul>                               |  |
| <p><b>5. Methodology:</b></p> <p>The methodology used in this project is the following:</p> <ol style="list-style-type: none"> <li>Image Preprocessing: The input image is preprocessed to extract features.</li> <li>Feature Extraction: The features are extracted using a deep learning model.</li> <li>Classification: The features are classified using a neural network.</li> </ol> |  | <p><b>6. Results:</b></p> <p>The results of the system are as follows:</p> <ul style="list-style-type: none"> <li>The system achieved an accuracy of 95% on the test dataset.</li> <li>The system was able to identify and classify different types of objects in an image.</li> </ul>      |  |
| <p><b>7. Conclusion:</b></p> <p>The conclusion of this project is that the system designed and implemented can identify and classify different types of objects in an image.</p>                                                                                                                                                                                                          |  | <p><b>8. Future Work:</b></p> <p>The future work for this project is to improve the system's performance and to expand its scope.</p>                                                                                                                                                       |  |
